## SUMMARY

road, louder, probated, bothers, muffler, night, care, workplace, fact, intentionally, freakin, loud, enforce, today, race car, volts, distinctive sound, class

## SPEAKERS

00:01

So here it is 9:45pm, and about 15 minutes ago, maybe a little bit more than that. I her our dear friend and they said my sight it has a very like distinctive sound it's very to. I mean I've never anything like that. I've never anything else other than sounds like it. In fact, the first time I it I was, I remember like up and saying, What the is that until I saw it, you know cuz it was so freakin loud and it was but, yeah, it's like 930 at night, that may have made at 930 at night, and the guys running the roads, 930 at night, and I swear I it So that's twice today that I've it, which would make it everyday this week. It's been going on the road. I'm wondering if they don't even care it it enforces. I'm wondering if like County, local law enforcement doesn't even care to enforce the fact that these are stats was Because as I was coming into town today probated. I saw one. And this was, this wasn't nearly like a class three side by side. This was not nearly a class three this was like, more or less like a class one, a much smaller one. One that's made for like foreign workers, something like that. Um, but I saw one in the workplace. Like, plain view of everybody. And he was, you know, sitting in the workplace and the only way he'd gotten there is by using the roads. So, appears to me that they're not this is not a concern of theirs. They don't care. But yeah, so anyway, been hearing it It is Friday after all. So it's definitely time for the weekenders to get out. And for me here I'm all night long. So, but I'll talk to you later. yeah I it twice today. That would make it every time, every day this week. It's hit the road, and we're on the roads. So we're not, I don't really care the fact that it's to have a road, but it's the fact that the thing is not doesn't have a muffler and straight pipe. And it's intentionally designed to be loud. And it's intentionally designed to be disruptive. And it has a noise is unlike anything else. And I can hear it louder. I mean it's louder than anything else in the area. And that's what bothers me about it is it's louder than 16 wheelers they're flying on the highway, it's larger than 16 volts, it's louder than any modify truck. It's louder than any race car. It's allowed to sing on the foot on the road. And that's what bothers me. And the other thing that bothers me is, is that it runs all night long. So, but anyway.
